

BIOTIN HOOF POWDER+

Biotin Hoof Powder+ is a hoof growth supplement for horses. The advanced formula targets hoof repair and development, with the added benefit of improving your horse's hair & skin integrity.

ADDITIONAL BENEFITS MAY INCLUDE:

- ✓ Improving coat shine
- ✓ Increased skin condition
- ✓ Promote growth of mane, tail, and coat
- ✓ Improve overall hoof condition.

KEY INGREDIENTS PER KG

1.0g Biotin, 50.0g Methionine, 9.0g Zinc,
101.8g Phosphorus, 153.1g Calcium, 83.4g MSM.

EACH 30g SCOOP CONTAINS

Biotin	30mg
Methionine	1,500mg
Zinc	270mg
Phosphorous	3,054mg
Calcium	4,594mg
MSM	2,502mg

DIRECTIONS FOR USE

Biotin Hoof Powder+ is highly palatable and can be easily mixed into daily feed rations.

Ponies 225-450kg: 15g (1/2 scoop daily)

Horses 450-600kg: 30g daily (1 scoop)

Horses > 600kg: 60g daily (2 scoops)

30g scoop provided

PACK SIZES

- ✓ **1.5kg** (50 days supply) 450-600kg horse
- ✓ **4kg** (133 days supply) 450-600kg horse
- ✓ **10kg** (333 days supply) 450-600kg horse

Vetsense:

VETSENSE BIOTIN HOOF POWDER+

Is safe to use with other nutritional supplements. For a horse with existing nutritional sensitivity, we recommend consulting your preferred Veterinarian or Equine Nutritionist prior to use. Daily use should be continued for six to nine months to achieve substantial improvement in the quality and growth rate of the hoof. Once hoof has strengthened, continue using biotin to prevent the hoof wall from deteriorating.

INGREDIENT INFORMATION

- ✓ **BIOTIN (VITAMIN B7)** is a B-complex vitamin that plays a vital role in maintaining the overall health and strength of a horse's hooves. Hoof health is crucial for a horse's mobility, performance, and overall well-being. Biotin is known to enhance hoof growth and improve the quality of the hoof horn.
- ✓ **CALCIUM** can be beneficial, especially for horses with hoof issues such as weak horn structure or slow hoof growth. It helps ensure that the horse receives an adequate supply of this essential mineral, which is necessary for optimal hoof development and maintenance.
- ✓ **CHELATED ZINC** has improved bioavailability, meaning it is more easily absorbed and utilised by the horse's body compared to other forms of zinc. This increased absorption can lead to better utilisation of zinc by the hoof tissues. Contributing to the production of keratin, the protein responsible for hoof growth and strength, zinc plays a crucial role in enzymatic reactions that are necessary for keratin synthesis, making it an essential nutrient for maintaining healthy hooves.
- ✓ **METHIONINE** is an essential amino acid that plays a crucial role in maintaining the health and strength of a horse's hooves. Amino acids are the building blocks of proteins, and methionine is specifically involved in the synthesis of keratin, which forms the structural basis of the hoof horn.
- ✓ **MSM** is a naturally occurring sulphur compound providing several benefits for horse hooves. It supports the production of keratin, the protein responsible for the growth and strength of hooves. By providing an adequate supply of sulphur, MSM aids in the formation of strong, resilient hooves that are less prone to cracking, splitting, and other hoof-related problems.
- ✓ **PHOSPHORUS** works in conjunction with calcium to form and maintain strong bones and hooves. It helps in the formation and mineralisation of the hoof horn, contributing to its strength and durability. Adequate levels of phosphorus are essential for proper hoof growth, as well as for repairing and maintaining hoof tissues.
