

Perfectly balanced "Muesli" to mix with raw meat

A healthy balanced diet consists of natural vegetable matter and grains with raw meat. **Complete Mix** represents the required vegetable matter and grain portion of your dog or cat's healthy diet. It is an economical way to ensure your dog or cat gets the best. You simply add **Complete Mix** to the appropriate ration of raw meat, like kangaroo, rabbit, beef, mutton, lamb or organic chicken and you have a 100% preservative and additive free, completely natural, raw, perfectly balanced meal. You can feel proud you are giving your pet the best.

No Cooking! To avoid the harsh damage to proteins, vitamins and enzymes caused by cooking **Complete Mix** is formulated in accordance with the principles of raw food. The ingredients are air dried at, or below, body temperature. The Muesli type mix is simply added to fresh, raw meat. For maximum benefit, it should be soaked in warm water. This promotes more digestibility, nutritional value and palatability. **Complete Mix** contains a combination of uncooked mixed cereal grains including rolled oats, cracked barley, flax seed meal and whole oats. The carefully formulated meal also has dried vegetables, garlic, parsley, barley grass, calcium, yeast, kelp, lecithin and vitamin C. There are five (5) different formulas to choose from.

*For dogs over 8 years increase the Complete Mix by 10% and decrease the meat by 10%
 *Feed to target weight.
 *K = Kitten *A = Adult Cat *S = Senior Cat
 *WL = Weight Loss diet

Make the right choice!

Which Complete Mix formula should my dog or cat have?

Different animals at different "life stages" have different dietary requirements so **Vets All Natural** have developed a range to suit all dog and cat sizes, ages and breeds. The formula variations are based on the level of growth, energy and nutrient requirements. Simply vary the amount fed based on the animal's weight using the feed table on each pack and in this brochure.

Weight Loss (Dog)

(Available in Premium Choice & Complete Mix)

The Weight Loss formula works on the principle of lower fat, lower protein, and a higher level of vegetable matter and roughage, with the net result being a lower calorie intake, whilst still providing high levels of essential nutrients. The Weight Loss formula is designed to be fed at a level according to the dogs "ideal" weight, rather than its current weight (eg If your dog is 32kg, but their ideal weight is 26kg, then you feed according to the 26kg feed chart level).

Adult/Senior Dog

(Available in Premium Choice & Complete Mix)

The adult formula is designed to fulfil the day to day needs of the average dog. Compared to puppies, adult activity falls, metabolism slows and growth stops. We have matched the required protein, fat, carbohydrate, fibre, vitamins and mineral levels. The Adult formula is higher in vegetable matter. Adult Premium Choice has a lower meat ration.

Puppy

(Available in Premium Choice & Complete Mix)

If your puppy is less than 1 year old they will thrive on this formula. Puppies need more protein and more base nutrients and vitamins to sustain their rapid growth rate. To achieve this the Puppy formula includes more yeast, calcium, kelp, barley grass, lecithin, and vitamin C.

Cat and Kitten

(Available in Premium Choice & Complete Mix)

Cats and kittens love our special cat and kitten varieties. Compared with dogs, cats are generally uniform in size and therefore dietary requirements vary little. The growth rate and requirements of kittens and adult cats are very similar. There is one cat formula for all ages. The formula is high in nutrient supplements to balance the small amounts used per meal. The meat blend in the Premium Choice is high to match their highly carnivorous nature.

Allerblend or Sensitive Skin

(Available in Premium Choice & Complete Mix)

This is ideal for dogs who rub and scratch. The allergy blend utilises a range of additional essential fatty acids, Chinese and western herbs (eg Astragalus, Perilla Seed, Reiki and Shitake mushroom), and powerful nutraceuticals to promote and restore gut health, and modulate the immune system. This combination of ingredients has demonstrated positive efficacy in treating and controlling allergic skin disease, inflammatory bowel disease, and can lessen the severity of auto-immune diseases.
